Data readiness

> Demonstration: built from synthetic data.

10 of 13 common business questions can be answered from this data. The data runs from 2024-10-01 to 2026-09-30 (24 months).

1. What the data can answer today

Question	Can it be answered?	What is still needed
Revenue over time	Ready	-
What moved revenue: price, volume, mix	Ready	-
Branches and sites compared	Ready	-
Customers: new, returning, lost	Partly	transactions.party_id
Profit by item	Not yet	transactions.cost
Profit and costs	Ready	-
Staff cost and productivity	Ready	-
Return on marketing	Ready	-
Against budget or target	Ready	-
Use of capacity	Ready	-
What if we open a new branch	Ready	-
Stock and waste	Not yet	inventory.on_hand
Demand forecast	Ready	-

2. What arrived, table by table

Standard table	Rows	Fields filled
Transactions	251,732	8 of 15
Items	15	5 of 5
Customers	2,730	4 of 5
Places	3	6 of 6
Expenses	480	4 of 4
Staff	72	6 of 6
Marketing	2,190	7 of 7

Standard table	Rows	Fields filled
Targets	144	4 of 4
Inventory	0	0 of 6

Not received at all: inventory.

3. How each source is collected, and the better way

Source	Today	Next step
loyalty	manual export	Ask the system's provider whether it has an API or can send a scheduled export; then it updates by itself.
ads	manual export	Ask the system's provider whether it has an API or can send a scheduled export; then it updates by itself.
budget	manual export	Ask the system's provider whether it has an API or can send a scheduled export; then it updates by itself.
pos	manual export	Ask the system's provider whether it has an API or can send a scheduled export; then it updates by itself.
ledger	manual export	Ask the system's provider whether it has an API or can send a scheduled export; then it updates by itself.
branches	manual export	Ask the system's provider whether it has an API or can send a scheduled export; then it updates by itself.
payroll	manual export	Ask the system's provider whether it has an API or can send a scheduled export; then it updates by itself.
menu	manual export	Ask the system's provider whether it has an API or can send a scheduled export; then it updates by itself.

4. Recommended next step

Some data is collected by hand. Automating it is the first step towards a dashboard that updates by itself. A connected data platform would read every system on a schedule into one database, check it on arrival, and feed the dashboard without anyone exporting a file. That is a separate piece of work, priced on its own.

5. Keeping personal data safe

Customer identifiers can be replaced by keyed tokens before anything is stored, so the analysis works without names or phone numbers. Whether personal data may be used at all, and on what legal basis, is the business's decision.
